Our Mission

BlueSky make the procurement of rigid packaging fast, simple, and consistent. Our packaging expertise and strategic supply chain management, combined with the instant availability of our huge stock range, provide the continuity and confidence you need to build your business.

Our Vision

To be the UK & Ireland's most trusted and dependable supply partner and stockist of rigid packaging.

Our Values

Commit and Deliver:

We have a can do, will do and DOES DO attitude. We accept responsibility and accountability. We are reliable and trustworthy. We deliver consistent performance.

Humble and Positive:

We are team players and positive irrespective. We are experts without ego. We are confident and caring. We celebrate wins and share learnings.

Hungry for Improvement:

We are always learning. We hold each other accountable in a supportive way. We are agile and ready for change. We value feedback and strive for continuous improvement.

PET Boston Round

PET Boston Round Bottles are highly customisable for brands across a variety of industries. Available in clear or UV-protective Amber PET, they are durable, lightweight, and ideal for light-sensitive products. Pair with screw caps, atomiser sprayers, flip tops, or treatment pumps for easy, precise dispensing.

More Info

Sustainability

PET

Our PET ranges are available with 30-100% post-consumer recycled (PCR) content. The inclusion of PCR content supports the circular economy, while maintaining the same quality and integrity as virgin PET.

Choosing at least 30% PCR content helps you avoid the UK Plastic Packaging Tax and supports compliance with the EU Packaging and Packaging Waste Regulation (PPWR).

Mono-Material Lotion Pump

Our expanding Mono-Material Lotion Pump range, available in 24/410 and 28/410 neck sizes, are fully kerbside recyclable and align with PPWR and UK EPR regulations. Intended for compatibility with PP, PET, and PE bottles and available in a variety of styles and finishes, these pumps are ideal for personal care, home care, and wellness applications.

Supports the "Recycle with Cap On" initiative.

Decorating Plastic

Our printing services offer an efficient and effective way to brand your plastic products. We can cater for both block (single pass) and multi-coloured (multi pass) designs printing straight on the bottle.

Printed labels are available via our trusted partners, who offer a selection of premium finishes and speciality options like white ink to achieve more vibrant colour results.

Techniques include silk screen, digital, pad printing and foil blocking. Depending on the design, these can be applied to both bottles and closures. Embossing and debossing are also available for added texture and premium branding.

Dip Tube Trimming

Treatment pumps, lotion pumps, trigger sprays and atomisers are stocked with dip tubes in various common lengths but if none suit your chosen bottle, we can trim them to match – saving you time and money.

Treatment pumps, lotion pumps, trigger sprays and atomisers.

6 semi-automatic machines.

Leadtime: 5 days subject to quantity.

MOQ: 1,000.

Cap Wadding

Cutting, insertion and fixing of liners including EPE, Induction Heat Seal (IHS) and Pressure Sensitive (PSL) into any size cap of your choice.

Any size cap with EPE liner, IHS, PSL

Leadtime: 5 days subject to quantity.

MOQ: 1,000.

Custom Moulding & Tooling

BlueSky's custom tooling service involves designing your bottle or jar to your exact specification and requirement. If your product demands something unique, whether that's playful curves, vintage shapes, or modern aesthetics, you can devise a recognisable packaging silhouette.

PET is a highly flexible material, allowing us to produce bottles and jars to your exact specifications using stretch blow moulding, with realistic 3D visuals provided before any tooling costs are incurred.

Our Process

1

Initial Design

Starting with your idea we will agree an initial design. We work from mood boards and your brand colours to produce a visual image of the desired result.

4

Manufacture Tooling

This is the exciting part. We manufacture tooling for the exact shape of your packaging design to produce a prototype.

2

Full Technical Specification

We then take your dimensions and produce a full technical specification with exact measurements and material details of what is achievable. This enables us to make an accurate model for you.

5

Pre-Production Sample

We then take your dimensions and produce a full technical specification with exact measurements and material details of what is achievable. This enables us to make an accurate model for you.

3

3D Print & Initial Sample

Before going into manufacture, we will send you a 3D printed sample so you can see the physical size and shape of your packaging.

6

Production

Once we have your approval, mass production commences! Fast, high quality production with food grade manufacturing standards if required.
